AssurePay Teller

Securely print teller documents
from our cloud-based platform
in minutes instead of hours

TROY ®

AssurePay Teller is the latest release of the market leading check printing software from Troy.

AssurePay Teller has been designed to streamline the production of all check related documents by integrating directly into your host financial system utilizing cloud-based technology and the very best in MICR laser technology.

Designed and built with security in mind, this state-of-the-art cloud-based application is highly configurable, fast to deploy and provides a low cost of ownership for all of your check printing needs.

AssurePay Teller prints cashier's checks, loan coupons, starter checks and much more in one pass of the printer following strict security protocols. The result is professional and highly secure teller documents that will be printed in a matter of seconds while your customer waits.

Accessing our check production applications has never been easier with the ability to use any desktop, laptop, tablet or even a mobile device within your business*, allowing for flexible printing and auditing across your branch network.

*user requirements and security settings apply for mobile device access

Frequent Updates

Under your service charge contract, updates will be applied automatically and with limited to no downtime, outage or interruptions. Updates to the print client application will be available to download from the web application as they become available. TROY takes care of the servers and will roll out regular software updates, including security updates so you don't have to worry about wasting time and money maintaining the system yourself.

Disaster Recovery Plan

Businesses of all sizes should be investing in robust disaster recovery plans and introducing cloud-based applications to your business saves time, avoids large upfront investment and provides your business with complete peace of mind that your check printing is covered should there be a disaster recovery situation. Protecting your data and systems is an important part of business continuity planning.

Flexibile Access

AssurePay Teller can be accessed from any device with an internet connection and modern web browser including Chrome, Firefox, Safari and Microsoft Edge and gives great flexibility to view and authorize payment runs on the go from any location. Printing from the application requires installation of additional software supported on Windows 8 and above.

Leading Security

- **Encryption HTTPS (SSL/TLS)** is used for all communication to and from the application.

- **Standard Multi-Factor Authentication (MFA)** strengthens your system by adding an extra layer of defense against unauthorized access, ensuring the protection of your valuable data.

- **Optional Single Sign-On (SSO)** functionality simplifies user access across multiple applications eliminating the need for multiple passwords and saving valuable time.

Reduced IT Costs

Moving to a cloud-based application can reduce the cost of managing and maintaining out dated on premise applications.

Cloud Based Technology for Your Business

SaaS (Software as a Service) is the most common form of cloud computing for businesses. You can access internet-hosted software applications using a browser, rather than traditional applications stored on each Teller station or server. With the new check writing software from Troy now running on Microsoft Azure cloud servers, we are responsible for controlling and maintaining the application, including all software updates and settings.

What this means to your business

Moving your on-premise counter based applications into the cloud will save you in IT time by reducing the cost of managing and maintaining your current software, provide you with automatic updates and ensure you always produce the highest quality check in the most secure environment available.

It will also protect your business processing which is an important part of business continuity planning. Whether you experience a natural disaster, power failure or other crisis, having your data stored in the cloud ensures it is backed up and protected in a secure and safe location. Being able to access your data again quickly allows you to conduct business as usual, minimizing any downtime and loss of productivity that can affect customer service levels.

Keep your business moving forward with AssurePay Teller
