Visible Features

1. NaNOcopy™
Copies or scans reveal the word VOID in microprint code.

2. Microprint
Appears as a line to the naked eye, when viewed under magnification text becomes visible.
3. Check 21 Friendly
Hidden microstructures survive low resolution scanning for authentication.

Check Paper Security Scale

Embedded Features

4. MICR / OCR Compliant
Meets or exceeds all ANSI standards & specifications for character recognition.

Visible Features

5. Warning Box
Outlines security features and examination methods for easy authentication.
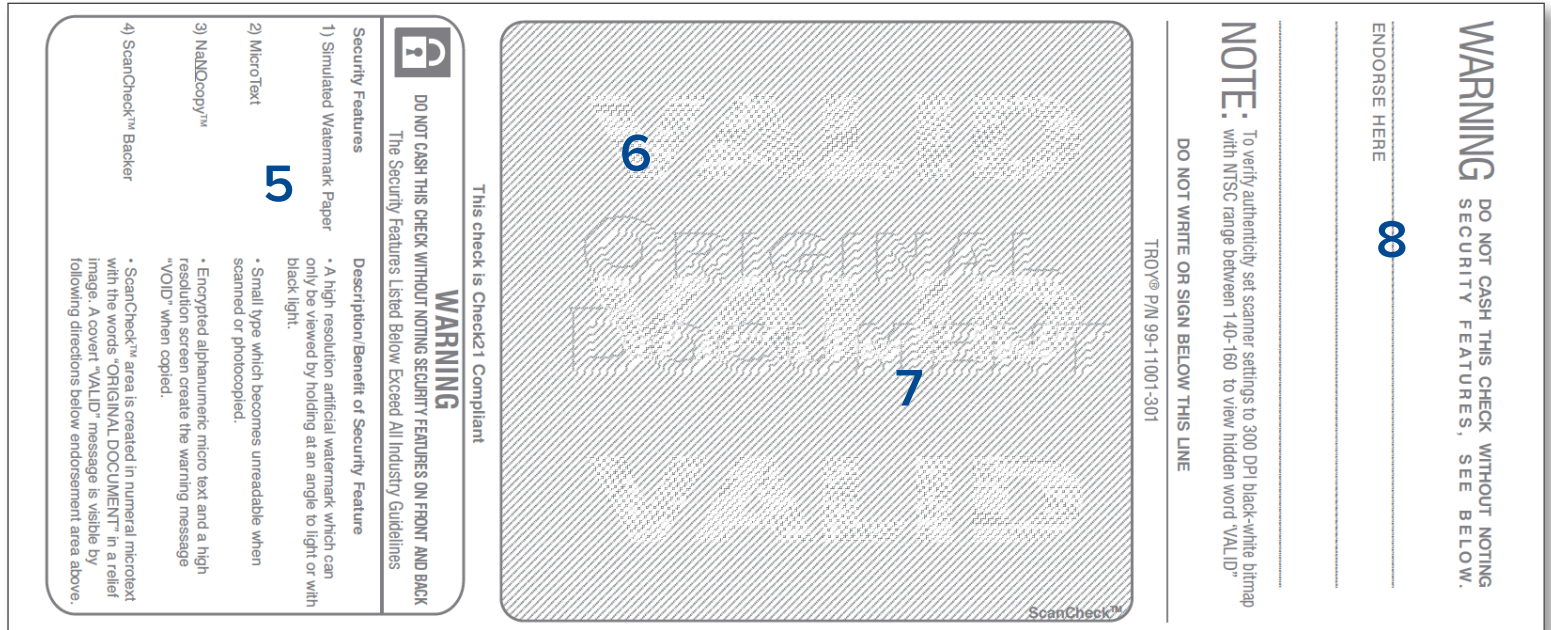

6. SCANcheck™
Custom scan settings reveal the word "VALID" for authentication.

7. Anti-Alteration Box
Three-dimensional relief image, watermark and microprint protect against alteration & replication.

8. Secure Endorsement Area
Microprint, watermark & coin reactive ink combine to reveal visible alteration attempts and provide means of validation.

Simulated Watermark "SECURE BY TROY" Emblem

Printed on the back, each emblem/watermark can be easily viewed when the check is held at an angle. Special coin reactive pigment has been built into the watermark, allowing the ink to change color and reveal the watermark when rubbed with a coin, providing a means of verification.
